Personal Website: https://germangarcia.dev

I am a highly motivated web developer that is focused on front end development.
I am eager to work hard, learn new technologies and improve on my current skills.

SKILLS

Languages: Javascript, HTML, CSS

Frameworks: ReactJS, Jest, Bulma

Tools: Git, Github, CLI, Heroku, Jira, Slack

Other: HTTP, API, CSS Flexbox

TECHNICAL PROJECTS

Word-Quiz - Front-End

The user receives a random definition fetched from an open source API and has to guess the correct word. The user can get up to two hints by clicking the hint button.

- Built a ReactJS front end that fetches API data and conditionally renders parts of the application. Used Bulma, a CSS framework, to style the application.

Info-Land - Front-End

A user can search for a specific country and get more information on that country. The user can also look through a list of all countries and sort and/or filter the list. Additionally, the user can click a country's map button and be directed to that country on Google Maps.

- Built a ReactJS front end that fetches API data from an open source API and conditionally renders parts of the application.

EXPERIENCE

North Laurel Community Center, Laurel, MD - *Facility Leader*
 2017 - 2022
- Assisted in planning and directing the daily operation of the center.
- Provided excellent customer service to 50+ members daily.
